

PROPOSED AMENDMENTS:

AMENDMENTS TO THE SPECIFICATION:

Amend the specification as follows:

Replace the paragraph beginning on page 7 line 15 with the following rewritten paragraph:

The main unit of the system or at least the swirling gas-liquid mixture outlet 5 is ~~installed~~ submerged in the liquid. By forcibly sending the pressurized liquid from a pressure liquid inlet pipe 7 into the cylindrical space 1 through the pressurized liquid introducing hole 2, a swirling flow is generated in the space, and a portion with negative pressure is generated near the axis of the cylindrical pipe. If desired, more than one pressure liquid inlet pipe can be used to introduce pressure liquid into the cylindrical space through additional pressure liquid inlet pipes and inlet openings, as shown in phantom by the elements indicated by reference numerals 7' and 2', respectively, on circumferential spacing about the wall of the unit.
